

Is your pump  
working harder  
than it has to?

Think about itt.

A pump that isn't precisely matched to its system wastes energy and maintenance dollars. PumpSmart® uses proprietary ITT algorithms embedded into a standard variable frequency drive to provide the next level of real-time pump control and protection. So process uptime increases, pumps last longer, catastrophic failures are avoided, and efficiency goes up—way up. Find out more. Visit [ittmc.com/pumpsmart](http://ittmc.com/pumpsmart), or call 1-800-734-7867.
