

# keeps slurry where it belongs: inside.

*Unique  
perimeter  
seal functions  
as a packing  
seal, allowing  
for repacking  
under pressure.*

The valves you currently use in FGD work fine—if you don't mind hot, corrosive slurry all over the place. The patented **Fabri-Valve® XS150-ULV** zero-discharge valve eliminates this problem. What's more, our liners are made of a proprietary, high-hardness urethane for maximum abrasion and corrosion resistance. The perimeter seal uses an independent elastomer to create bubble-tight bi-directional shutoff. You'd be surprised how many valves compromise performance by making seals and liners of the same material.

For your free copy of our power catalog—including information about our equally well-designed slurry pumps—visit [ittindustrialproducts.com](http://ittindustrialproducts.com) or call 1-800-734-7867.
