

The design of the TaperBore Plus seal chamber causes particles to flow away from mechanical seal faces and clean liquid to flow toward them. The result is greatly increased seal life.

**You see our patented seal chamber.
Clogging solids see a brick wall.**

The vane particle ejectors featured on the **TaperBore™ Plus** seal chamber do a meticulous job of whisking solids, vapors, and air away from the seal faces. Seals run cooler with better face lubrication—and their useful life is greatly extended. Since seal failure is responsible for more than 90 percent of service events, the TaperBore Plus is a significant advance in pump technology that delivers tangible benefits. It's just another example of the kind of engineering innovation you'll find on every Goulds pump. For more information, visit www.ittindustrialproducts.com or call 1-800-734-PUMP.
