

Goulds 3410

Small Capacity Double Suction Pump

3410

Double Suction Pumps Designed for a Wide Range of Industrial, Municipal, and Marine Services.

- Capacities to 7,000 GPM (1591 m³/h)
- Heads to 550 feet (168 m)
- Temperatures to 350° F (177° C)
- Pressures to 250 PSIG (1724 kPa)

Design Features

- **Double Suction / Dual Volute** - Design assures axial and radial balance for long life, low maintenance.
- **Horizontally Split Casing** - Suction and discharge nozzles in lower half casing for ease of inspection/maintenance.
- **Wear Rings** - Easily replaceable wear rings protect against impeller, casing wear.
- **Sealing Flexibility** - Choice of a wide range of mechanical seal or packing.
- **Maximum Parts Interchangeability** - Entire line uses just four rotating assemblies (exclusive of impellers and wear rings).

Services

- **Process** - Quench water, stripper bottoms, reboiler circulation, cooling tower
- **Pulp & Paper** - Primary and secondary cleaner, filtrate, mill water supply shower, fan pump
- **Primary Metals** - Primary and secondary cleaner, filtrate, mill water supply shower, fan pump
- **Municipal** - High lift, low lift, wash water, waste water, raw water
- **Utilities** - Cooling tower, component cooling, service water
- **Marine** - Bilge and ballast, cargo, cooling water, fire pump

Other Features/Application Flexibility

Optional Oil Lubrication

Field convertible with no remachining required.

Oil Lubricated Coupling End Bearings

Oil Lubricated Thrust End Bearings

Water Cooled Bearings

Bearing Protection

Inpro VBX-D Labyrinth Seals Supplied As Standard

VBX-D seals are ideal for eliminating contaminants and providing long life with no shaft wear or heat generation. A full range of other seal types is available.

Inpro VBX-D Labyrinth Oil Seals

Optional Mechanical Seals

A wide variety of mechanical seals (including cartridge and split type) are readily available for maximum sealing flexibility.

Factory installed mechanical seals feature enlarged stuffing box bores for improved seal lubrication and cooling; extended seal life.

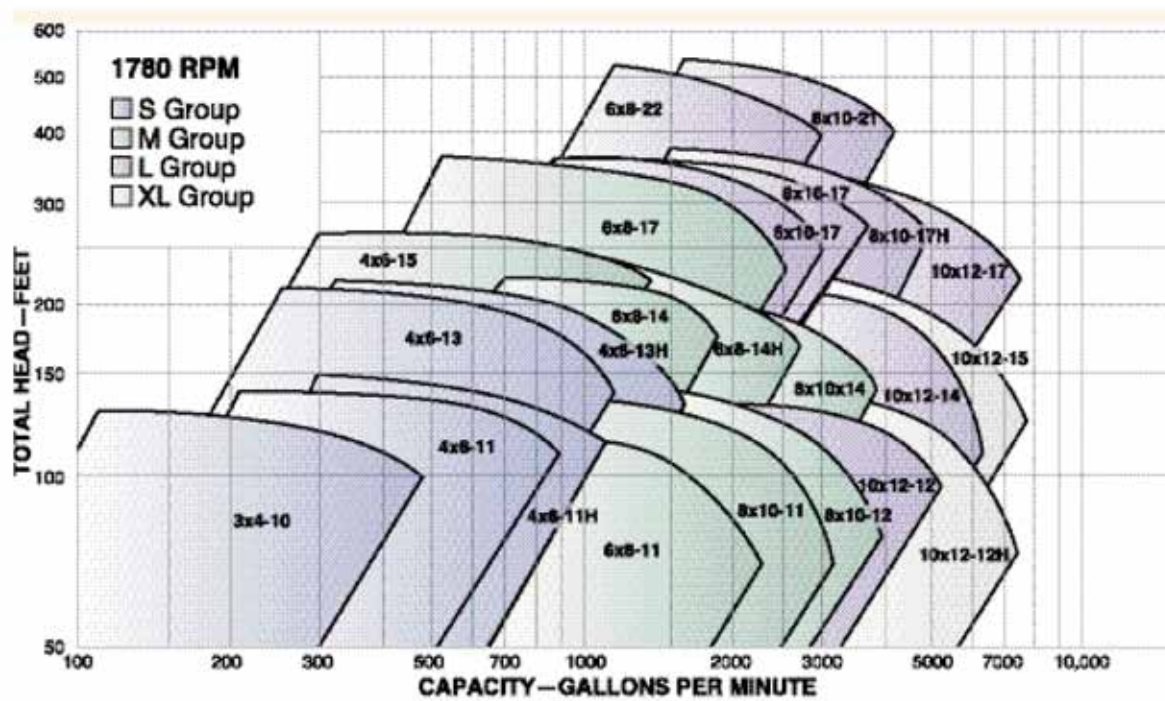

Single Unbalanced Seal

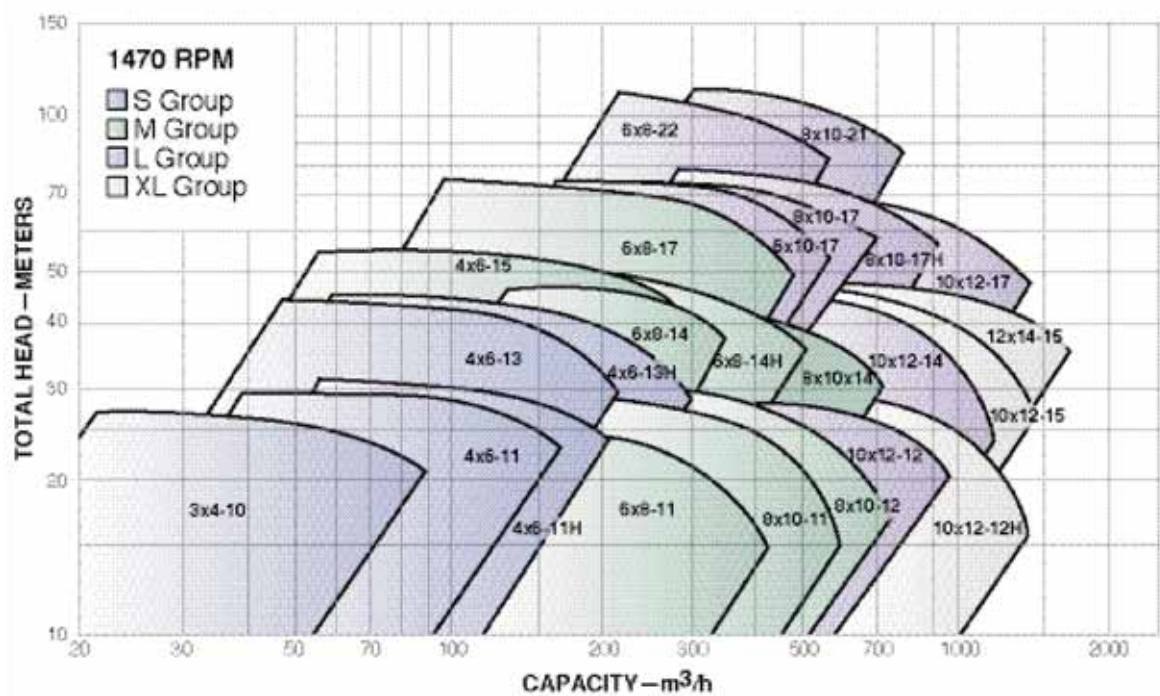

Single Balanced Seal

Hydraulic Coverage

60 Hz

50 Hz

Sectional View

S Group

Model 3410 S Group is standard less shaft sleeves. Sleeves to protect stuffing box area are optional. Impeller is key driven and held axially by retaining rings.

M, L, XL Group

3410 Single Stage Double Suction Pumps

Standard Design Features for Wide Range of Heavy Duty Industrial, Municipal & Process Services

RENEWABLE CASE WEARING RINGS

Permits easy maintenance of proper running clearances. Locked in place by anti-rotation pins.

DOUBLE SUCTION IMPELLER

Minimizes axial thrust. Polished waterways and fully machined exterior surfaces assure highly efficient, smooth performance.

HEAVY DUTY SHAFT

Designed for minimum deflection at maximum load. Dry shaft design—sealed by O-rings at sleeve / impeller hub and impeller bolt.

STUFFING BOX GLANDS

Two-piece investment cast stainless steel glands standard on all constructions.

BALANCED DESIGN

Dual volute casing design equalizes radial forces and lessens radial reaction of shaft and bearings — assures smooth, vibration-free performance. Ideal when pumps must periodically operate at capacities above or below design capacity or during intermittent high head conditions. Combined with double suction impeller for axial balance, the 3410 is designed for long life, low maintenance. (Dual volute casing not available on all sizes.)

RENEWABLE IMPELLER WEARING RINGS

Available as an option on all sizes. Locked on impeller hub with set screws.

LABYRINTH BEARING PROTECTION

Labyrinth isolators are standard on the Model 3410. Ideal for eliminating contaminants and improving mean time between failure.

DOUBLE ROW THRUST BEARING

Regreasable double row thrust bearing for high axial thrust capability. Locked on shaft in bearing housing positively positions rotating element and carries any residual axial thrust. Oil lubrication with constant level oilers optional.

POSITIVE LIQUID SEALING

Shaft positively sealed from pumpage with gaskets and O-rings.

HEAVY DUTY CASING

Rugged foot-mounted design to resist external forces and vibration. Casing wall designed to withstand high working pressures with minimum distortion. Both suction and discharge connections in lower half, allowing removal of upper half casing for inspection or removal of complete rotating element without disturbing piping or driver.

LARGE INLET AREAS

Reduce NPSH requirement and assure smooth flow to impeller eye for efficient, quiet operation.

Maximum Interchangeability

Entire 3410 product line utilizes just four shafts and two bearing assemblies.

NOTES:

*† Dimensions shown are for packed box only.

** O. D. of shaft through stuffing box is 1-3/4 in. in standard S Group sleeveless construction.

** Dual Volute Casings

All dimensions in inches and (mm), weights in Lbs. and (kg).

Bearing Protection

Goulds Model 3410 is available in a vertical configuration (3410 V). This arrangement is ideal for applications with limited space such as shipboard service. A rugged fabricated steel frame supports the pump and driver, providing a machined fit for positive alignment when using standard P-base or C-Face motors.

Model 3410 V

All dimensions are in inches (mm) and are not to be used for construction or installation purposes.
 Sizes 2x3-11, and 4x6-11/H, 3x4-10, 8x10-21 & 6x8-22 are furnished with 250# FF discharge flange as standard.
 Standard rotation is right hand (CW). Optional rotation is left hand (CCW).
 Steel casings will have 150# or 300# flanges.

Specifications

General

Pump shall be single stage, double suction design. Materials shall be bronze-fitted, 316 stainless steel trim or all 316SS. High efficiency, heavy duty design and maintenance features shall be of primary importance as described in following specifications.

Casing

Shall be horizontally split with upper and lower halves bolted together. Flanged suction and discharge connections shall be located in lower half. Removal of upper half shall permit inspection, maintenance or removal of entire rotating element without disturbing suction or discharge piping or driver. Seats for stuffing box bushing shall be cast and bored integrally with lower half casing. Casing shall be supported by integrally cast feet. Upper half shall have taps for seal piping, priming and vents. Lower half shall have taps for gauges and draining. Casing shall have permanently fixed stainless steel nameplate.

Impeller

Shall be enclosed, double suction to provide hydraulic balance, and cast in one piece. Exterior surfaces shall be machined, interior water ways hand finished. Shall be dynamically balanced and keyed to shaft.

Wearing Rings

Case wear rings shall be supplied to maintain proper running clearance with impeller hubs and to minimize leakage between suction and discharge chambers of casing. Shall be held in position by anti-rotation pins. Impeller shall be designed to accept impeller wear rings. Impeller rings shall be held in position by axial set screws.

Shaft

Shall have as short a span as possible to minimize deflection and vibration. Shall be completely sealed by gaskets between the shaft sleeves and impeller hubs to assure shaft is completely dry during operation.

Shaft Sleeves (Except S Group)

Shall be held in position by sleeve nuts located outside the stuffing box area. Shall be key driven at the impeller end. An O-ring seal shall be provided to prevent leakage between sleeves and sleeve nuts.

Stuffing Boxes

Shall be integral with casing. Shall contain die-formed packing, split, removable lantern rings and renewable stuffing box throat bushings. Shall have tapped openings for water sealing either from casing or from outside source. Glands shall be split so it will be unnecessary to unbolt gland halves when repacking box.

Mechanical Seals

Pump shall be furnished with (single, double balanced, cartridge) mechanical seals.

Bearing Housings

Seats shall be cast and bored integrally with lower half casing to assure accurate alignment of rotating assembly without need for external adjustment.

Bearings

Double row ball bearing shall be provided on thrust end; single row deep groove ball bearing on coupling end. Thrust bearing shall be held in position on shaft with tapered snap ring and locked in bearing housing. Radial bearing shall be free to float axially in housing to take radial load only. Housings shall be completely sealed by Inpro VBX labyrinth seals to exclude moisture and dirt making units suitable for outdoor installation. Shall be grease lubricated with reliefs to prevent over lubrication.

Bedplate and Coupling

Bedplate shall be cast iron with drip collection chamber, tapped drain connection and opening for grouting. Flexible coupling shall be supplied.

3410

The Most Complete Line of Double Suction Pumps in the Industry

Small Capacity

Flows to 8,000 GPM

3408

- Capacities to 6,000 GPM (1363 m³/h)
- Heads to 570 Ft. TDH (174 m)
- Temperatures to 250° F (120° C)
- Working Press. to 400 PSI (2758 kPa)

3410

- Capacities to 8,000 GPM (1817 m³/h)
- Heads to 570 Ft. TDH (174 m)
- Temperatures to 350° F (177° C)
- Working Press. to 250 PSI (1724 kPa)

Large Capacity

Flows to 65,000 GPM

3420

- Capacities to 65,000 GPM (14,762 m³/h)
- Heads to 400 Ft. TDH (122 m)
- Temperatures to 275° F (135° C)
- Working Press. to 200 PSI (1379 kPa)

Medium Capacity

Flows to 12,000 GPM

3409

- Capacities to 12,000 GPM (2725 m³/h)
- Heads to 850 Ft. TDH (259 m)
- Temperatures to 250° F (120° C)
- Working Press. to 400 PSI (2758 kPa)

Extra Large Capacity

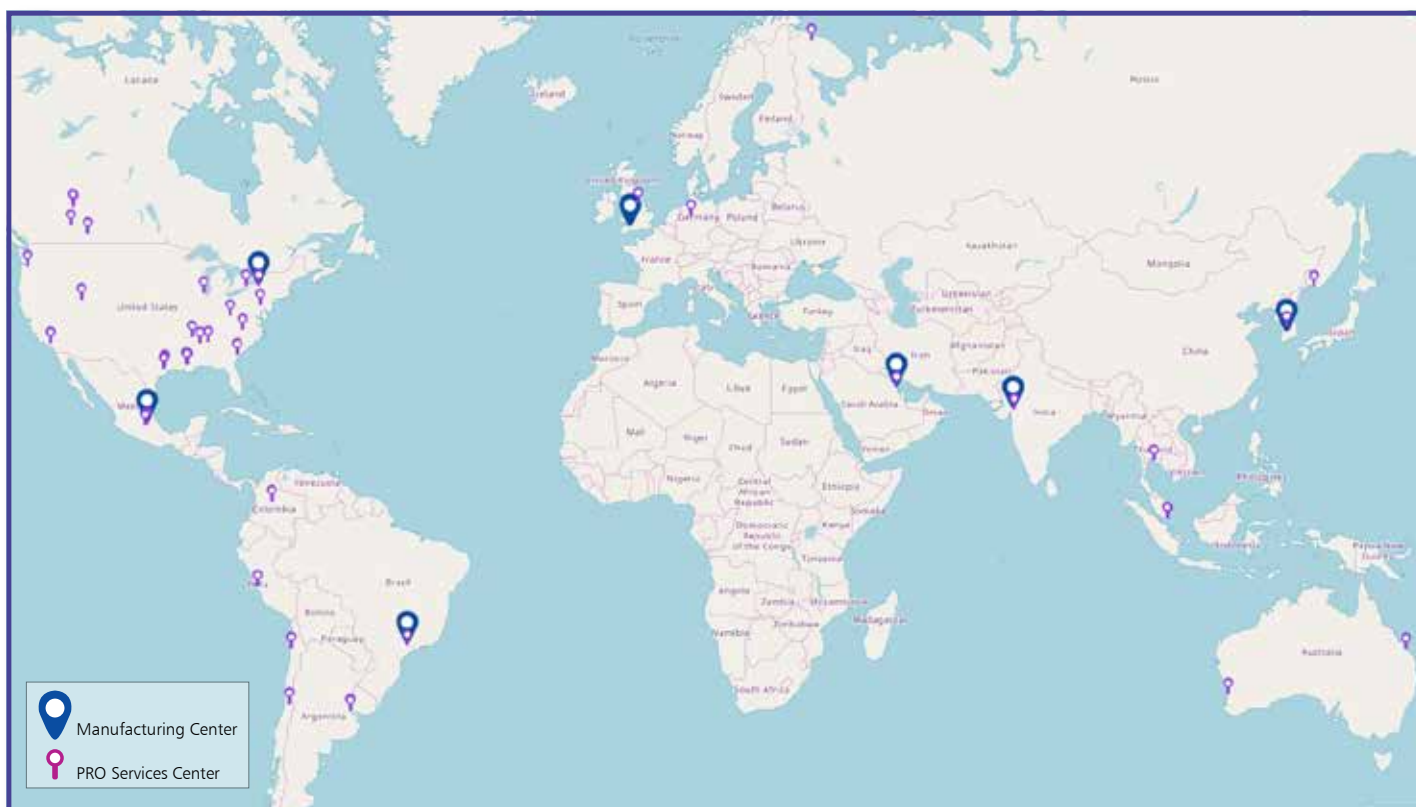

Flows to 225,000 GPM

3498

- Capacities to 225,000 GPM (51,098 m³/h)
- Heads to 800 Ft. TDH (244 m)
- Temperatures to 275° F (135° C)
- Working Press. to 250 PSI (1724 kPa)
